**ABSTRACT OF THE DISCLOSURE**

Multipurpose fancy goods having a plurality of sheets connected to each other to form a polyhedron. The multipurpose fancy goods including a first regular square-shaped sheet, a second regular square-shaped sheet, a first regular triangle-shaped sheet, and a second regular triangle-shaped sheet each being made of a polypropylene foam sheet. Each of the first and second regular square-shaped sheets has four regular square-shaped sheet coupling parts each protruded outwardly from one side of each edge. Each of the first and second regular square-shaped sheets has four regular square-shaped sheet coupling through holes each formed around each corner. Each of the first and second regular triangle-shaped sheets has three regular triangle-shaped sheet coupling through holes each formed around each corner.
